

DISPLAY INSTALLATION

Mhs Homes

The Brief

Mhs Homes Display Installation Project – Broadside

MHS Homes are a housing association and registered charity providing affordable homes for people in Medway. They own and manage over 10,000 homes, making them the largest independent social landlord in the UK. They believe that everyone deserves a decent home.

They were looking to create an eye-catching and accessible digital display to promote their corporate messages, play news and keep their team updated. The brief was to use 4 55" TV screens, hooked up to each other to broadcast one image.

The Solution

NCS Technology supplied and fitted 4 Benq TVs with a controller and a PC. We also arranged and provided software training to members of Mhs Homes' staff, so they could regularly update their display. The installed software has an easy to use interface, meaning updates are stress-free and easy to implement.

Benefits

- ✓ **Mhs Homes' staff are now more up to date with corporate messages and events**
- ✓ **The office has a modern, up-to-date feel**
- ✓ **The software is easy to use and their team has been trained on how to use it effectively**
- ✓ **The installation was quick and tidy, meaning the MHS team could carry on working while NCS was on-site**
- ✓ **Affordable and quality technology installed**

We used NCS as we have used them many times in the past and the engineers and staff always helpful, polite, knowledgeable and friendly. We had to get 3 quotes as it was a large project but we always hope NCS come in the best as we trust them and their workmanship. The engineers are second to none they leave the building tidier than when they start and all aspects of the install are tested and working before they leave. 100% I would recommend NCS to everyone. I recommended them to another employer of mine and now NCS are doing great things in the NHS. For all cabling, Wi-Fi and audio visual installs and planning NCS would be my first choice.
