

SCHOOL NETWORK UPGRADES

The King's School Canterbury

The Brief

NCS Technology has worked with The King's School on numerous network upgrades across their site, including data and fibre works in their new classrooms and school shop, a major data and fibre refurbishment of an old dormitory block, as well as data network re-design and re-cabling in the school's recreation and sports centre.

The Solution

High levels of service at short-notice

At short notice, The King's School asked NCS Technology to quote for a CAT6 and CAT5e data cabling project to support their boarding and staff areas wireless implementation.

Benefits

Working in listed and highly decorative buildings, NCS Technology completed the project on-time and with minimal disruption.

"Working with NCS has been a painless and seamless transition from our previous supplier. The work carried out to date is of the highest standard and I found the Installers to be helpful and always willing to move things around at short notice, they are professional, courteous and meticulous in their work."

Simon Reynolds - Network Manager of The King's School
